

SECURITY IS SEXY

POWER ON

You may have heard about a recent news report that details the dangers of sensitive information that may be stored on the hard drive of copy machines.

We wanted to take this opportunity to inform you that Power On has always taken a proactive approach when dealing with old or unused copy machines.

When we upgrade or replace our customers' equipment, our certified technicians perform a series of comprehensive procedures – one of which is to erase or re-format the hard drive on any piece of equipment that has one.

If you have concerns about your specific equipment or our procedures about removing stored information, please don't hesitate to call.

Many thanks for your continued business!
